

What W Claim Is:

1. A ruler adapted to aid in cutting a sheet of material in a perpendicular direction to its length, said ruler comprising a flat piece of rigid material, having a thin thickness on one of its edges but increasing to a thickness to another one of its edges to accommodate a cutting groove within said material of increased thickness.

2. The ruler of claim 1 including a hardened insert in said groove to prevent any edges of said groove from being damaged by a cutting instrument.

3. The ruler of claim 1 including means for connecting at least two of said rulers to each other.

4. The ruler of claim 3, wherein said means for connecting includes an eyelet extending from an end of said ruler and a depression placed on an underside of said ruler.

5. The ruler of claim 3, wherein said eyelet and said depression are of a matching configuration to snap-fit into each other.

6. The ruler of claim 1 including a measuring scale placed at one of the edges of said ruler.
